

Safety-Gram

Title 45, Chapter 11

November 2023

Volume 24, Number 11

Who's On Your Mine Site?

Unless your mine is staffed around the clock, there will always be an opportunity for unauthorized access. Fences and locked gates help but cannot prevent a determined individual from entering the mine area. For areas where unauthorized access is a major problem, the use of alarms and security cameras should be considered.

Evidence to Look For:

- Tampering of locked gates
- Cut fences, broken fences
- Unrecognized vehicle tracks or footprints
- Non-mine-related litter
- Theft/Vandalism

Recommendations:

- Keep gates locked
- Monitor likely areas of access
- Post warning signs
- Secure equipment/remove keys
- Remove unused or unnecessary equipment

CAUTION

ENTERING MINE AREA

**AUTHORIZED PERSONNEL ONLY
NO ADMITTANCE
WITHOUT AUTHORIZATION**

OAC 460:10-17-14(5) – In all excavation of rock, provisions for safety to persons and to adjoining property must be provided including, but not limited to the following requirements: (A) Fencing may be required at any excavation in rock which exceeds twenty feet in depth. (B) Fencing along with “natural barriers,” such as swamps, river, and marsh may not be required. (C) Fencing along sides of quarries on natural slopes or where no highwall is present may be required to discourage access to the highwall base of other parts of the quarry. Cultural or other barriers including, but not limited to rock barricades, elevated roadways, railroads and building facades may be accepted by the Department.

DANGER

**MINE SITE
NO TRESPASSING**
