Brian Ineking

Comments:

Based on the check weights of these goats they are still gaining weight and we have increased the feed amount from 0.25 to 0.3 lbs/hd/d over the last 14 days because of those weights. The goats are probably going to start more rut activity due to the cooler weather and shorter day lengths but we will continue to monitor that activity. Overall FEC decreased which was somewhat of a surprise to me based on the moisture conditions.
